-------------------------------------	---	--	---	--------------------------------------

Table of Contents

This document covers the full product specification for Pulse 360, including platform architecture, user roles, product workflows, cross-product data flows, governance, and the reporting layer.

1. Executive Summary
2. Platform Purpose & Vision
3. Platform Architecture & Hierarchy
4. User Roles & Permissions
5. Login & Access Flow
6. Product Launcher
7. Client Onboarding
8. Brand Book – Brand Knowledge Layer
9. Pulse Plan – Media Planning
10. Pulse Scout – Market Intelligence
11. Pulse Engage – Campaign Execution
12. Pulse Shift – Surveys & Research
13. Cross-Product Data Flow
14. Reporting Layer
15. Credit & Governance System
16. Audit & Logging
17. Product Navigation & Switching
18. Core System Services
19. Real-World User Journey
20. Glossary

1. Executive Summary

Pulse 360 is an enterprise-grade Marketing Operations Platform that connects every stage of the marketing lifecycle — from strategic brand profiling through to campaign execution and impact measurement — within a single, unified SaaS environment.

The platform is designed for marketing agencies that manage multiple clients and brands. Each client can access a tailored set of products, with role-based permissions controlling what each user can see and do. All five product modules share a common data layer, ensuring that brand intelligence, planning data, execution metrics, and measurement insights are always connected.

Core Value Proposition

Pulse 360 eliminates the fragmentation typical in enterprise marketing stacks by providing a single platform where strategy, intelligence, execution, and measurement operate as one connected system — not five disconnected tools.

Product Suite at a Glance

Module	Primary Function	Primary Users
Pulse Plan	Media planning, budget allocation, approval workflows	Media Planners, Managers
Pulse Scout	Market & competitor intelligence, keyword monitoring	Intelligence Analysts
Pulse Engage	Campaign execution, audience targeting, performance tracking	Campaign Managers
Pulse Shift	Survey creation, audience research, impact measurement	Research Analysts
Brand Book	Brand profiling, positioning, audience & messaging data	Brand Strategists

2. Platform Purpose & Vision

Marketing operations in enterprise environments are complex. Agencies coordinate across multiple clients and brands simultaneously, managing high-volume campaigns that span digital, broadcast, and out-of-home channels. Research and measurement are often siloed from planning, and campaign intelligence rarely feeds back into strategy in real time.

Pulse 360 was created to solve this systemic fragmentation. The platform provides:

- A continuous marketing loop from brand knowledge to strategy to execution to insights.
- A single source of truth for brand data, shared across all planning, execution, and measurement activities.
- Multi-tenancy support so agencies can manage hundreds of clients and brands on one platform.
- Role-based access control ensuring every user sees exactly the information and tools relevant to their function.
- A credit-based consumption model for survey and campaign execution that gives clients predictable, measurable usage.

Marketing Lifecycle

Brand Knowledge → Strategy → Market Intelligence → Campaign Execution → Impact Measurement → Insights → Strategy Optimisation → (repeat)

3. Platform Architecture & Hierarchy

Every action in Pulse 360 is governed by a strict organisational hierarchy. This hierarchy determines what a user can see, which products they can access, and what actions they can perform.

3.1 Hierarchy Levels

Level	Description	Key Attributes
Platform	The top-level Pulse 360 environment	Managed by Super Admin; controls all global settings
Agency	A marketing agency using the platform	Can manage multiple clients; controls product access
Client	A brand owner or advertiser managed by the agency	Can have multiple brands; assigned specific products
Brand	A distinct brand identity within a client	Has its own Brand Book, plans, campaigns, and surveys
Product Access	Which modules are enabled for a client/brand	Configurable per client; can be enabled/disabled at any time
Product Role	A user's role within a specific product	Determines read/write/approve permissions
Feature Permissions	Granular controls within each product	Controls visibility of specific features and data

3.2 Hierarchy Flow

Access Cascade

Pulse 360 Platform → Agency → Client → Brand → Product Access → Product Role → Feature Permissions Each level inherits constraints from the level above. An Agency Admin cannot grant permissions that exceed their own. A Client Admin cannot enable products that the Agency has not assigned.

4. User Roles & Permissions

4.1 Platform-Level Roles

Role	Responsibilities
Super Admin	Platform owner. Manages agencies, product settings, feature flags, global reporting, and billing. Has unrestricted access to all modules.
Agency Admin	Manages all clients and users within their agency. Controls product access, credit allocation, and governance configuration. Cannot access other agencies' data.
Client Admin	Represents a client organisation. Manages client users, brand settings, and product roles. Cannot access agency-level settings.

4.2 Product-Level Roles

Each product module has its own set of roles. A user may hold different roles in different products.

Pulse Plan

Role	Capabilities
Media Planner	Creates and edits media plans; selects channels and allocates budget; uploads rate cards; submits plans for approval.
Manager / CST	Reviews submitted plans; approves or rejects with comments; locks budgets; oversees overall planning activity.
Client (Viewer)	Views approved plans and exports reports. Cannot edit or create plans.

Pulse Scout

Role	Capabilities
Scout Admin	Configures monitoring campaigns; sets keywords, target websites, and frequency; has full dashboard access.
Editor	Can edit monitoring configurations and view dashboards.
Viewer	Read-only access to dashboards and trend reports.

Pulse Engage

Role	Capabilities
Campaign Admin	Full access to create, launch, pause, and archive campaigns. Manages team access within the product.
Campaign Creator	Creates and edits campaigns; cannot launch without approval; can

	view performance dashboards.

Pulse Shift

Role	Capabilities
Survey Admin	Manages survey credits; creates, publishes, and archives surveys; views all response data and analytics.
Survey Creator	Creates and edits surveys; launches surveys within credit limits; views own survey results.

5. Login & Access Flow

The login and session management system ensures every user lands in the correct context immediately upon authentication.

5.1 Authentication Steps

1. User navigates to the Pulse 360 login page or SSO endpoint.
2. System validates credentials against the user directory (email, password, or SSO token).
3. On successful validation, the system checks: user status (active/inactive), organisation assignment, MFA if enabled.
4. Session is created and the system loads the user's context: agency, client, brand access, product access, and role per product.
5. User is routed to their default landing experience based on their highest-level role.

5.2 Landing Experience by Role

Role	Default Landing
Super Admin	Platform-level dashboard showing global usage, active agencies, revenue metrics, and system health.
Agency Admin	Agency dashboard showing client overview, active campaigns, credit usage, and team activity.
Client Admin	Client dashboard showing brand-level metrics, active plans, and product usage summary.
Product Users	Product launcher screen showing cards for all assigned modules.

6. Product Launcher

The Product Launcher is the central hub that users see after login if they do not have a higher-level admin role. It provides access to all assigned modules from a single, consistent interface.

6.1 Launcher Interface

The launcher displays a card for each product the user has been assigned. Cards that are not assigned are hidden — they do not appear as locked or greyed out. Each visible card includes:

- Product name and icon.
- A short description of the product's purpose.
- Current access status (e.g. Active, Trial, Suspended).
- A prominent Launch button to open the product.

6.2 Products Available in Launcher

Product	Description	Typical Users
Pulse Plan	Create, manage, and approve media plans across all channels.	Media Planners, Managers
Pulse Scout	Monitor competitor activity, keyword trends, and market signals.	Intelligence Analysts
Pulse Engage	Build and launch campaigns, track performance in real time.	Campaign Managers
Pulse Shift	Design surveys, collect responses, and measure campaign impact.	Research Analysts
Brand Book	Access and update the brand's strategic knowledge base.	Brand Strategists, All Roles

Context Persistence

When a user switches from the launcher into any product, their current brand context is carried forward. They do not need to re-select their brand on each product entry.

7. Client Onboarding

Client onboarding is the process by which an agency sets up a new client on the platform and configures their access to the Pulse 360 suite.

7.1 Onboarding Steps

Step 1 — Create Client Record

The Agency Admin creates the client record with the following information:

- Client name and industry vertical.
- Primary website URL.
- Key contact person (name, email, phone).
- Contract start and end dates.
- Billing details (if applicable).

Step 2 — Create Brands

Within the client record, the admin creates one or more brand profiles. Each brand requires:

- Brand name and category.
- Target market or geography.
- Brand owner (internal contact).
- Initial Brand Book population (can be completed later by brand strategist).

Step 3 — Enable Products

The Agency Admin selects which Pulse 360 modules the client is licensed to use. Products not enabled remain invisible to the client's users. Each product can be enabled or disabled at any time.

Step 4 — Create Users & Assign Roles

For each user to be added, the admin specifies:

- Full name and email address.
- Role at the client level (Client Admin or Product User).
- Product access and product-level role for each enabled module.
- Brand access (which brands the user can see within the client).

Step 5 — Allocate Credits

For Pulse Shift and Pulse Engage, the admin assigns a credit budget to the client. Credits can be further sub-allocated to individual users or teams.

8. Brand Book — Brand Knowledge Layer

Brand Book is the central brand intelligence layer of the Pulse 360 suite. It acts as the single source of truth for brand data, and all other products draw from it when they need brand context.

8.1 Brand Book Sections

Section	Content
Brand Overview	High-level description of the brand — its category, heritage, market position, and key facts.
Mission & Vision	The brand's purpose statement and long-term vision for its market.
Brand Pillars	The core values and principles that define how the brand behaves and communicates.
Competitors	A structured list of direct and indirect competitors, with notes on positioning differences.
Tone & Messaging	Approved language, tone guidelines, key messages, and phrases to use and avoid.
Audience Segments	Defined audience personas including demographics, psychographics, and channel preferences.
Keywords	Primary and secondary search keywords associated with the brand, used by Pulse Scout and Pulse Plan.

8.2 How Other Products Use Brand Book

- Pulse Plan pulls brand keywords and audience segments to inform channel selection and targeting.
- Pulse Scout uses brand keywords and competitor data to configure monitoring campaigns automatically.
- Pulse Engage uses audience segment data to pre-populate campaign targeting parameters.
- Pulse Shift uses brand pillars and audience segments to suggest relevant survey questions.
- The Reporting Engine uses brand metadata for filtering and benchmarking reports.

9. Pulse Plan — Media Planning

Pulse Plan is the media planning module of the Pulse 360 suite. It enables media planners to build comprehensive, multi-channel media plans and route them through a structured approval process.

9.1 Core Workflow

Step 1 — Select Brand Context

The planner selects the brand they are creating the plan for. Brand Book data (keywords, audience segments) is automatically loaded into the planning context.

Step 2 — Select Channels

The planner chooses from available media channels:

- Digital: Google Search, Google Display, Meta (Facebook/Instagram), Programmatic.
- Broadcast: TV (national, regional), Radio.
- Out of Home (OOH): Billboards, Transit, Digital OOH.

Step 3 — Budget Allocation

The planner distributes the total campaign budget across selected channels. The system provides allocation guidance based on historical performance benchmarks.

Step 4 — Upload Rate Cards

Media cost rate cards are uploaded per channel. The system uses these to calculate estimated reach, impressions, and cost-per-metric for each channel.

Step 5 — Forecast Results

Based on the budget and rate cards, the system generates:

- Estimated reach by channel.
- Total impressions.
- Estimated ROI benchmarks.
- GRP (Gross Rating Points) for TV and Radio.

Step 6 — Submit for Approval

The completed plan is submitted to the assigned manager for review. The plan enters a pending approval state.

9.2 Approval Workflow

Action	Description
Manager: Review	Reviews the submitted plan in full; can add comments at line-item level.
Manager: Approve	Approves the plan, making it visible to the client stakeholder.
Manager: Reject	Rejects with mandatory comments explaining required changes. Plan

	is returned to planner for revision.
Manager: Lock Budget	Locks the plan budget to prevent further changes after approval.
Client: View	Client stakeholder can view the approved plan and add comments.
Client: Export	Client can export the plan as PDF or Excel for internal distribution.

10. Pulse Scout — Market Intelligence

Pulse Scout is the intelligence and governance module. It provides continuous monitoring of competitor activity, keyword trends, and broader market signals, giving brands a real-time view of their competitive landscape.

10.1 Core Workflow

Step 1 — Configure Monitoring Campaign

The analyst creates a monitoring campaign by defining:

- Campaign name and brand context.
- Target keywords (drawn from Brand Book or entered manually).
- Target websites and domains to monitor (competitor sites, news portals, industry publications).
- Geographic scope of monitoring.
- Monitoring frequency (real-time, daily, weekly).
- Campaign duration (start and end dates).

Step 2 — Governance Validation

Before the monitoring campaign is activated, the system validates it against the governance rules configured by the Agency Admin:

- Keyword count must not exceed the configured limit.
- Campaign duration must fall within permitted ranges.
- Targeting scope must not exceed the approved geography.
- Campaign cost must be within the budget allocated.

If any rule is violated, the campaign is blocked and the user is shown a specific governance violation message.

Step 3 — Data Collection

Once active, Scout continuously collects:

- Competitor ad campaigns (creative, copy, placements, platforms).
- Keyword search volume trends.
- Ad placement intelligence (where competitors are appearing).
- Market signals from monitored domains.

Step 4 — Intelligence Dashboard

Collected data is surfaced in an interactive dashboard showing:

- Keyword trend charts (volume over time).
- Competitor activity feed (new campaigns detected).
- Share-of-voice comparison.
- Top performing ad creatives from competitors.

- Geographic distribution of competitor activity.

10.2 Governance Rules

Agency Admins configure governance rules at the agency or client level. Rules include:

Rule Type	Description
Keyword Limit	Maximum number of keywords permitted per monitoring campaign.
Budget Cap	Maximum spend per campaign period; system blocks campaigns that exceed this.
Duration Limit	Maximum and minimum allowable campaign durations.
Targeting Restrictions	Geographic regions or content categories that are restricted from monitoring.

11. Pulse Engage — Campaign Execution

Pulse Engage is the campaign execution module. It enables campaign managers to build, launch, and monitor marketing campaigns directly within the Pulse 360 platform, using a credit-based consumption model.

11.1 Core Workflow

Step 1 — Create Campaign

The campaign manager creates a new campaign by specifying:

- Campaign name and brand context.
- Objective (awareness, consideration, conversion, retention).
- Channel (digital channels connected via the platform's integrations).
- Creative assets (uploaded or selected from the asset library).
- Audience targeting (drawn from Brand Book audience segments or manually defined).
- Campaign budget and flight dates.

Step 2 — Credit Validation

Before the campaign can be submitted for launch, the system checks:

- The campaign's credit cost (calculated from audience size, duration, and channel).
- Available credits in the client's account.
- If sufficient credits are available, the campaign moves to the launch stage. If not, the manager is prompted to request a credit top-up.

Step 3 — Launch Campaign

On launch, the campaign is activated and credits are deducted from the client's balance. The system records the activation timestamp and begins collecting performance data.

Step 4 — Performance Monitoring

The live performance dashboard displays:

- Real-time impressions and reach.
- Engagement rate (clicks, interactions).
- Conversion events.
- Cost per result (CPM, CPC, CPA as applicable).
- Pacing against budget (daily spend vs. plan).

11.2 Campaign States

State	Description
Draft	Campaign is being built; not yet submitted for review.
Pending Approval	Campaign submitted; awaiting Campaign Admin approval.
Approved	Campaign approved and scheduled for launch.

Active	Campaign is live; performance data is being collected.
Paused	Campaign temporarily suspended; credits are not being consumed.
Completed	Campaign has reached its end date; final report generated.
Archived	Campaign closed and stored for historical reference.

12. Pulse Shift — Surveys & Research

Pulse Shift is the measurement and research module. It enables research analysts to design surveys, deploy them to defined audiences, collect responses, and generate insights that measure brand health and campaign effectiveness.

12.1 Core Workflow

Step 1 — Create Survey

The analyst creates a survey by defining:

- Survey name and brand context.
- Survey type (brand health tracker, campaign impact study, audience insight, custom).
- Question set (multiple choice, rating scales, open text, semantic differential).
- Target audience criteria (pulled from Brand Book audience segments or defined manually).
- Desired sample size.

Step 2 — Credit Validation

The system calculates the credit cost based on sample size and audience complexity. The analyst is shown the estimated cost before launch. If credits are sufficient, the survey moves to the ready state.

Step 3 — Launch Survey

On launch, the survey is distributed to the target audience panel. Credits are deducted based on responses collected (not upfront).

Step 4 — Response Collection

The live response dashboard shows:

- Total responses collected vs. target sample.
- Completion rate.
- Response breakdown by audience segment.
- Real-time charting of key question results.

Step 5 — Analysis & Reporting

Once the target sample is reached (or the survey is manually closed), the system generates:

- Brand recall score.
- Net Sentiment Score.
- Campaign impact rating (for post-campaign surveys).
- Audience insight report by segment.
- Exportable survey report (PDF, Excel).

13. Cross-Product Data Flow

One of the key differentiators of Pulse 360 is that all five products share a connected data layer. Data produced in one product is available — where appropriate — to all other products and to the reporting engine.

Data Flow Direction

Brand Book → Pulse Plan → Pulse Scout → Pulse Engage → Pulse Shift → Reporting Engine Data flows both downstream (from strategy to execution) and upstream (from execution results back to Brand Book and strategy).

13.1 Data Exchange Map

From	To	Data Transferred
Brand Book	Pulse Plan	Keywords, audience segments, competitor list, channel preferences
Brand Book	Pulse Scout	Brand keywords, competitor domains, monitoring targets
Brand Book	Pulse Engage	Audience segment definitions, targeting parameters
Brand Book	Pulse Shift	Audience personas, brand pillars for survey design
Pulse Plan	Pulse Engage	Approved budget by channel, flight dates, campaign objectives
Pulse Plan	Reporting Engine	Planned budget, forecasted reach, approval timestamps
Pulse Scout	Pulse Plan	Competitor activity insights to inform planning decisions
Pulse Scout	Reporting Engine	Market signal data, keyword trend indices, competitor metrics
Pulse Engage	Pulse Shift	Exposed audience data for post-campaign survey targeting
Pulse Engage	Reporting Engine	Actual spend, impressions, engagement, conversion data
Pulse Shift	Brand Book	Updated audience insights, brand recall scores, sentiment data
Pulse Shift	Reporting Engine	Survey results, brand health scores, campaign impact ratings

14. Reporting Layer

The Reporting Engine aggregates data from all five product modules into a unified intelligence layer. Reports are available at platform, agency, client, and brand levels.

14.1 Reporting Levels

Level	Metrics Available
Platform Reporting (Super Admin)	Global product adoption, total revenue, system-wide usage statistics, agency-level benchmarks.
Agency Reporting (Agency Admin)	Client performance summary, total budget under management, campaign volume, credit consumption across clients.
Client Reporting (Client Admin)	Brand-level metrics, plans created, active campaigns, survey completions, budget vs. actuals.
Brand Reporting (All Roles)	Campaign performance, keyword trends, brand health scores, competitor share-of-voice.

14.2 Unified Dashboard Metrics

The unified reporting dashboard includes the following standard metric groups:

- Planning: Plans created, budget planned, approval cycle time.
- Intelligence: Keyword volume trends, competitor campaign count, market signal index.
- Execution: Active campaigns, impressions delivered, engagement rate, conversion rate, cost per result.
- Research: Surveys launched, responses collected, brand recall score, net sentiment score.
- Platform: Credit consumption, product adoption rate, user activity.

14.3 Filtering & Segmentation

All reports can be filtered by:

- Agency
- Client
- Brand
- Product module
- Date range
- Campaign or plan

15. Credit & Governance System

15.1 Credit Model

Pulse Shift and Pulse Engage operate on a credit-based consumption model. Credits are purchased by the agency and allocated to clients. Clients can further sub-allocate credits to individual users or teams.

Product	Credit Consumption Model
Pulse Engage Credits	Consumed per campaign activation. Cost calculated by audience size × channel × duration.
Pulse Shift Credits	Consumed per survey response collected. Cost varies by audience panel complexity.

Credits are deducted automatically when a campaign launches or a survey response is collected. If a client runs out of credits, active campaigns are paused and new launches are blocked until credits are replenished.

15.2 Governance Controls

Governance rules protect the platform from misuse and ensure compliance with client-defined constraints. Rules are configured by the Agency Admin and applied at the campaign or survey level.

Governance Rule	Effect
Budget Cap	Maximum allowable campaign spend in a given period.
Keyword Limit	Maximum number of keywords per Scout monitoring campaign.
Targeting Restrictions	Blocked geographies, audience categories, or content classifications.
Duration Limits	Minimum and maximum allowed campaign or survey durations.
Approval Thresholds	Campaigns or plans above a certain budget threshold require additional approval steps.

16. Audit & Logging

Every significant action in the Pulse 360 platform is recorded in an immutable audit log. Logs are searchable, filterable, and exportable by authorised users.

16.1 Logged Events

- Authentication: Login, logout, failed login attempts, SSO events.
- User Management: User creation, role changes, deactivation, password resets.
- Access Changes: Product access granted or revoked; brand access changes.
- Planning Events: Plan created, edited, submitted, approved, rejected, locked.
- Campaign Events: Campaign created, launched, paused, resumed, completed.
- Survey Events: Survey created, launched, closed, results published.
- Credit Events: Credit allocation, deduction, top-up requests.
- Governance Events: Governance rule violations, blocked campaigns, rule changes.

16.2 Log Access

Role	Log Access Scope
Super Admin	Access to all logs across all agencies and clients.
Agency Admin	Access to logs for their agency and all clients within it.
Client Admin	Access to logs for their client only.

17. Product Navigation & Switching

Pulse 360 provides seamless navigation between all product modules without requiring re-authentication. The top navigation bar is present across all products.

17.1 Top Navigation Bar

The top navigation bar contains:

- Pulse 360 logo / home link (returns to Product Launcher).
- Product Switcher: dropdown or tab bar for Pulse Plan, Pulse Scout, Pulse Engage, Pulse Shift, Brand Book, and Reports.
- Brand context indicator: shows the currently active brand; clicking it opens the brand selector.
- Notifications icon: shows alerts for pending approvals, governance violations, and credit warnings.
- User avatar / menu: access to profile settings, help, and logout.

17.2 Context Persistence

When a user switches between products, the platform preserves:

- The currently selected agency and client.
- The currently active brand.
- The user's authentication session.

This eliminates repetitive context selection and reduces friction in cross-product workflows.

18. Core System Services

All five product modules are built on a shared set of platform services. These services ensure consistency, security, and scalability across the entire suite.

Service	Function
Authentication Service	Handles login, SSO, session management, and MFA. Integrates with enterprise identity providers (SAML, OAuth 2.0).
User Directory	Central store of all users, roles, and permissions. Single source of truth for access control.
Client & Brand Service	Manages the agency → client → brand hierarchy and all associated metadata.
Permission Engine	Evaluates access requests in real time against role and product configurations. Enforces hierarchy rules.
Reporting Engine	Aggregates data from all product modules. Generates cross-product dashboards, standard reports, and exports.
Credit Service	Tracks credit balances, allocations, deductions, and top-up requests across all clients.
Governance Service	Stores and evaluates governance rules. Blocks non-compliant campaigns and logs violations.
Audit Log Service	Records all platform events with immutable timestamps, actor identity, and change details.
Notification Service	Delivers in-platform alerts, email notifications, and webhook events for integrations.

19. Real-World User Journey

The following end-to-end example illustrates how a full marketing campaign lifecycle plays out across all five products on the Pulse 360 platform.

Step	Actor	Action & Outcome
1. Client Setup	Agency Admin	Creates a new client record for 'Acme Consumer Goods'. Adds two brands: AcmeFresh and AcmePro. Enables all five modules. Allocates 500 Engage credits and 2,000 Shift credits.
2. Brand Profiling	Brand Strategist	Opens Brand Book for AcmeFresh. Enters brand mission, positioning pillars, audience segments (Health-Conscious 25-40, Budget Families), competitor list, and primary keywords. Saves to the platform.
3. Media Planning	Media Planner	Opens Pulse Plan. Selects AcmeFresh. Uses Brand Book audience data to select Google, Meta, and OOH channels. Allocates \$200K budget. Uploads rate cards. Reviews forecasted 4.2M reach. Submits plan.
4. Plan Approval	Manager	Reviews plan in Pulse Plan. Approves with a comment to increase OOH allocation by 10%. Budget is locked. Client stakeholder is notified.
5. Market Intelligence	Intelligence Analyst	Opens Pulse Scout. Creates a monitoring campaign using AcmeFresh keywords from Brand Book. Sets competitor domains. Launches monitoring. Within 48 hours, detects that primary competitor has increased spend on Google by 40%.
6. Campaign Launch	Campaign Manager	Opens Pulse Engage. Creates a campaign aligned to the approved plan. Audience targeting auto-populated from Brand Book. Deducts 120 credits on launch. Campaign goes live across Google and Meta.
7. Impact Measurement	Research Analyst	Opens Pulse Shift. Creates a post-campaign brand lift survey targeting AcmeFresh audience segments. Sets 500-response sample. Launches survey. 500 responses collected over 3 days. Brand recall improved 8 points.
8. Reporting	Client Admin	Opens the Reports module. Views the unified client dashboard showing: \$200K planned vs. \$194K actual spend, 4.1M impressions delivered, 3.2% engagement rate, 8-point brand recall lift. Exports full report as PDF.

20. Glossary

Term	Definition
Agency	A marketing services company that uses Pulse 360 to manage campaigns on behalf of its clients.
Brand	A distinct brand identity within a client organisation, with its own Brand Book, plans, and campaigns.
Brand Book	The centralised brand knowledge module that stores all strategic brand data for use across the suite.
Credit	A unit of consumption used by Pulse Engage and Pulse Shift to meter campaign and survey activity.
Governance	Platform-enforced rules that limit campaign spend, targeting, duration, and other parameters.
Media Plan	A structured document in Pulse Plan outlining channel selection, budget allocation, and reach forecasts.
Monitoring Campaign	A Scout configuration that continuously collects market and competitor intelligence.
Product Launcher	The central dashboard that users see after login, showing all their assigned product modules.
ROI	Return on Investment — the estimated or actual return from a media investment.
SSO	Single Sign-On — allows users to authenticate once and access all Pulse 360 products without re-logging in.
Super Admin	The platform owner role with unrestricted access to all agencies, clients, and system settings.
Survey	A research instrument in Pulse Shift used to collect audience feedback and measure brand or campaign performance.
